

Quick Start Deployment Support-Chromebook/GAfe (10 hour Remote Consultation)

Due to the inter-connectedness of Chromebooks within an institution's Google Apps for Education Domain, a thoughtful, informed deployment plan is a prerequisite. Among other things, school or district IT personnel must assess the current configuration of an existing domain or design a new domain for instruction that utilizes both Google and Chromebook Applications. This planning is vital in creating a sound technical framework that leverages the use of sub-organizations, domain-level groups and application settings for each sub-organization.

Goals of this Engagement:

- Provide 10 hours of remote consultation to support the deployment of Chromebooks & Google Apps for Education;
- Determine an optimal organizational structure for the Google Apps domain;
- Assist Staff in Chromebook Management and use of the Chrome Management Console;
- Make recommendations for school-based deployments, founded on best practice.

Description:

An Educational Collaborators Google/Chromebook IT expert with experience in a school environment will work with the school/district Central IT staff for 10 hours remotely to assist in setting up their Google domain and determine if the domain set up has the optimal organizational structure for data and sub-organizations based upon best practice and their specific needs. The remote work can be recorded via Google Hangouts on Air and saved for later use. Allocation of the time will be customized to meet the unique needs of the client. Support can be facilitated synchronously via phone, chat or video conference (Hangout) as well as asynchronously via email.

Though customized to your specific needs, this engagement typically includes:

- Orientation to the Google Admin Console
 - Domain setup consultation, including considerations for multiple domains and sub-organizations
 - Strategies for the provision of users, applications, and extensions
 - Remote assistance for Chromebook Management policy setup
 - Discussion of various third-party tools that can be leveraged
 - Setup of Google Play for Education and exploration of Common Core alignment
